

Introduction

0:00

In a digital society, comprehensive strategies must be devised to protect its employees, customers, partners, data, information, and business from cyber threats.

Meet PhishX!

A digital security ecosystem for People that simplifies cyber risk mitigation, covering a complete set of solutions:

- Awareness Platform: PhishX.
- Personal Assistant against digital fraud: PhishX Assistant.
- Gamification Platform: My PhishX.
- Data and information integration platform: the PhishX API (Application Programming Interface).

With the PhishX ecosystem, you can train, measure, analyze, manage, and reduce risks for organizations and people, based on continuous micro-training and integrated collaborative tools.

Design simulations with our templates, create knowledge paths for your challenges, evaluate the use of those steps and recognize the people who contribute to your organization's digital security.

Standard, Advanced and Premium.

PhishX will help you to transform the people in your organization into true allies of your digital security strategy.

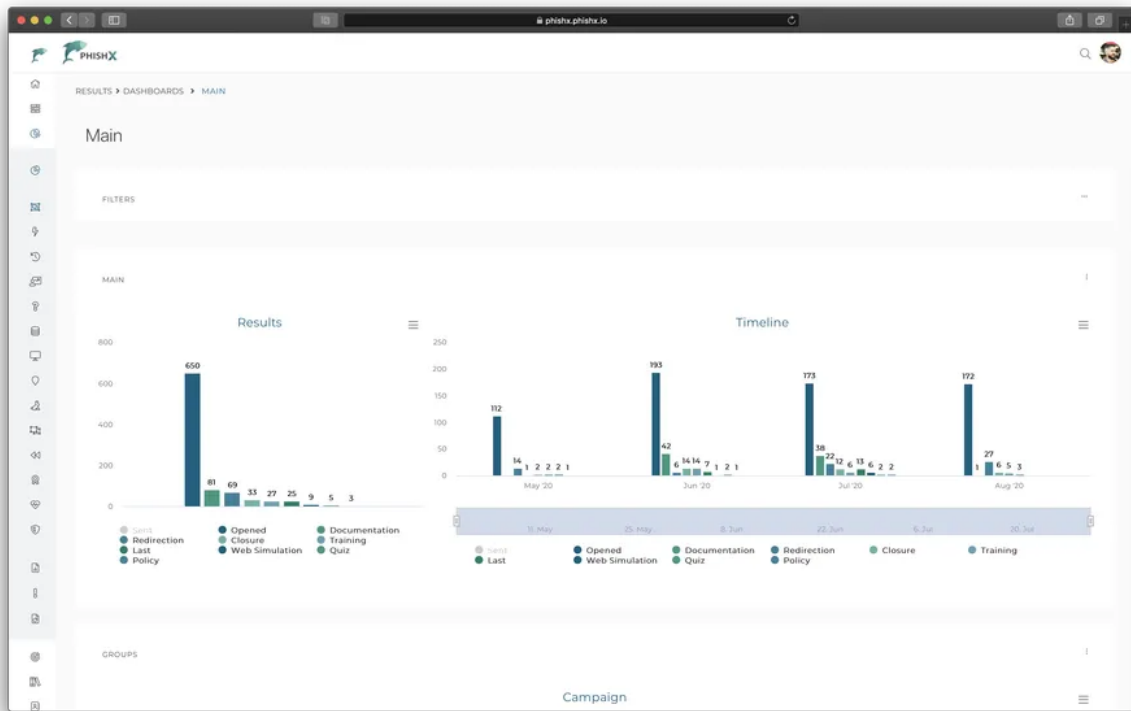

PhishX integrates the conscious human intelligence of your organization, with the artificial intelligence of your cyber security.

Get in touch now and better understand how to be part of this new world of opportunities with PhishX, Cybersecurity for People.

If you have additional questions, we can make a conference call or send an email to [PhishX Support](#).

Documentation

[Quick Start →](#)

Made by PhishX with ❤️

Requirements

tl;dr

1. Copy our information:
 - Domains list. [Domains](#)
 - Copy our IPs list. [IPs](#)
2. Change your environment:
 - E-mail protection settings.
 - Web Content Filter protection settings.
3. Verify:
 - Define the people who will participate in the validation.
 - Access the portal, or ask for our support, and send a validation e-mail campaign.

Settings

The technical requirements are simple and we have this great guide to illustrate them, with several options and preference suggestions. In general, you need to ensure that the user will receive our messages and will be able to access our online training portal.

TIP

We recommend allowing all of our domains and IPs.

► [Minimum Requirements](#)

If you have additional questions, we can make a conference call or send an email to [PhishX Support](#).

We are available to help your teams.

Certificates

tl;dr

- 1. You can test it yourself at Qualys SSL Labs: [SSL Server Test](#)

SSL Certificates

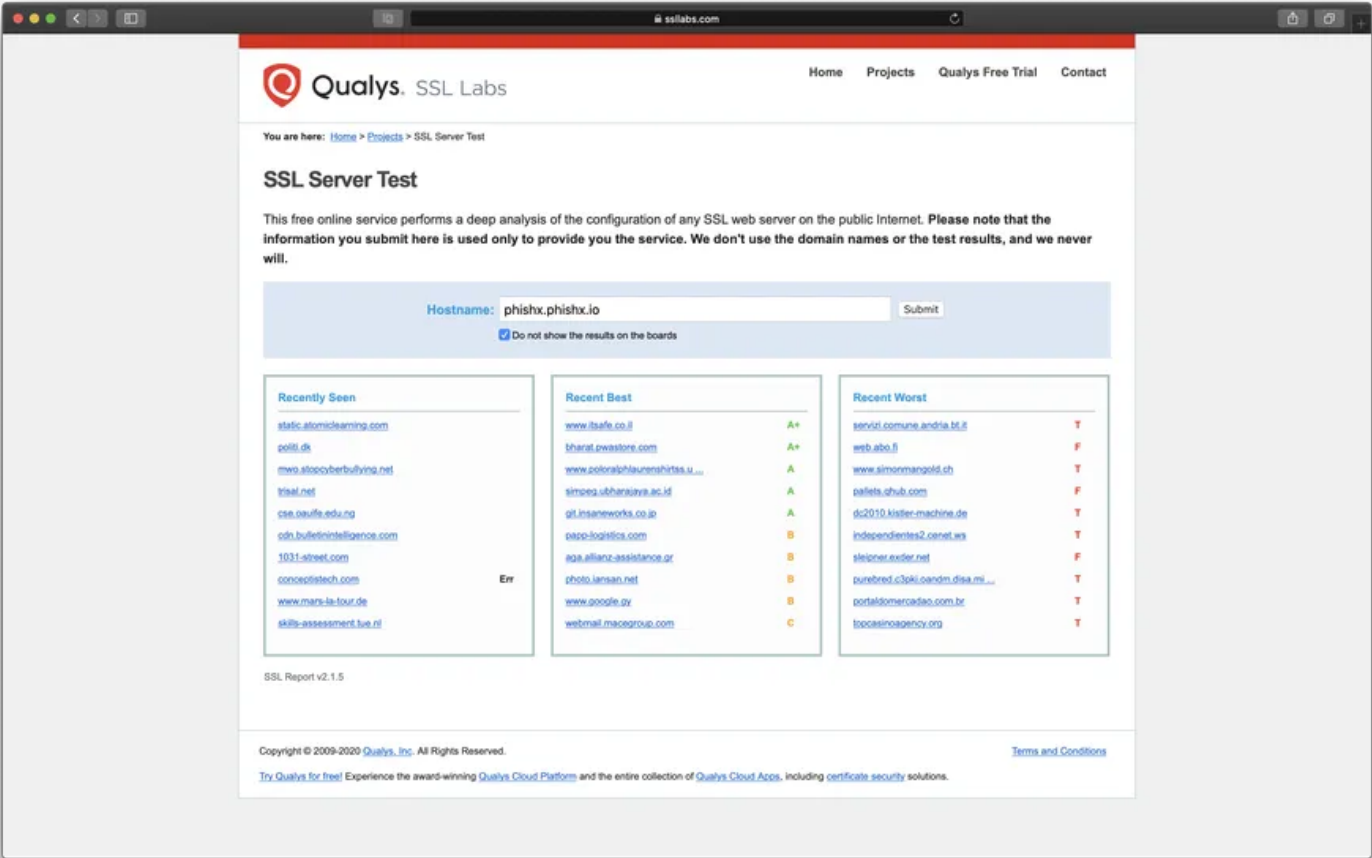

TIP

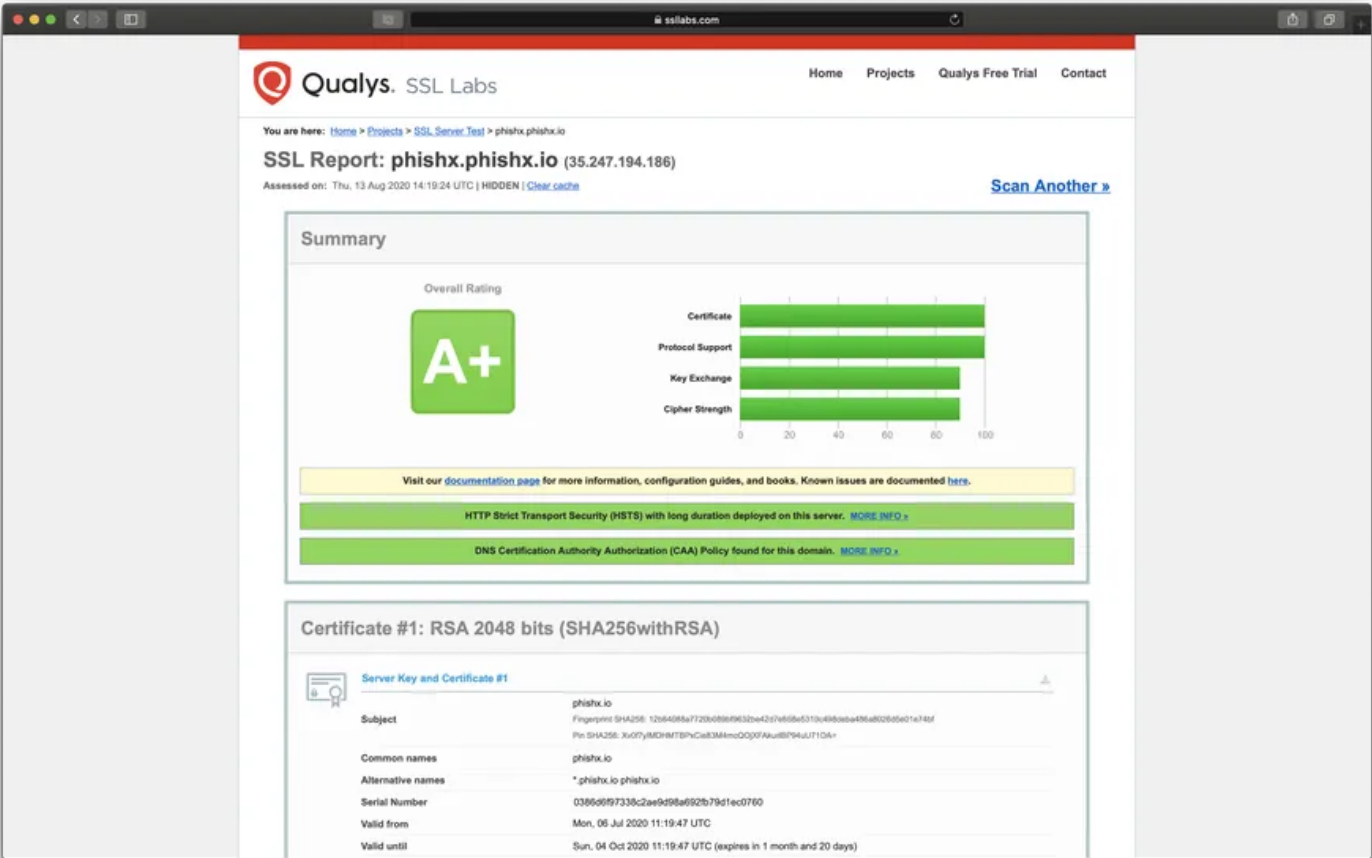

All PhishX SSL Certificates receives A+ score in Qualys SSL Labs.

Settings

- 1. Access the Qualys SSL Labs.

Email whitelist

VuePress is composed of two parts: a [minimalistic static site generator](#) with a Vue-powered [theming system](#) and [Plugin API](#), and a [default theme](#) optimized for writing technical documentation. It was created to support the documentation needs of Vue's own sub projects.

Each page generated by VuePress has its own pre-rendered static HTML, providing great loading performance and is SEO-friendly. Once the page is loaded, however, Vue takes over the static content and turns it into a full Single-Page Application (SPA). Additional pages are fetched on demand as the user navigates around the site.
